

I AM ACTIFY CENTRO

Enterprise Information Management

Manage Product Data

Centro is an Integration Platform and Central Repository for discrete manufacturers' product data to enable Enterprise Data Discovery.

Centro integrates many line of business systems and databases in order to deliver a centralized and unified view of your product data which enables the rapid retrieval of vital information and business insights.

Visibility to product data

Centro delivers a single unified platform that significantly speeds up enterprise data access, visible through a browser on a variety of hardware. Centro delivers a unified view of product data and associated documentation, including CAD.

Rapidly search and find information

Centro Catalog is a platform for searching and displaying projects and parts, with powerful search tools used to filter through thousands of parts based on key product attributes to rapidly locate and view your results at a glance.

Compare, analyze and validate data

Centro is a toolbox of functions for viewing, comparing and interrogating data available within the application at the user's disposal. Delivering side by side comparison of available product data, SpinFire Web delivers CAD viewing within the application to enable view, measure and mark-up of CAD files.

Control, giving the right people access to the right data

Centro delivers out of the box control by defining user based access rights and permissions so you have peace of mind that the right people get access to the right data. Control is critical to any enterprise data management platform in order to control what information is shared either internally or with external partners.

CENTRO

Integration Platform

Centro's Integration platform allows the business user to self-service and create connections between systems and applications to rapidly scale the visibility and availability of data across the enterprise.

Centro enables the business user to construct information pipelines to automate the publishing of any modifications and ensure concurrency of files and data. This gives organizations the ability to synchronize their product data to eliminate duplicate parts and data inaccuracies caused by disparate information silos

Flexibility

Centro is flexible, handling different types of integrations and managing different file formats, connecting to virtually any data source in a non-intrusive manner and is CAD application neutral. Centro supports integrations with enterprise systems such as ERP, PLM and other databases within both cloud and legacy systems.

Self-Service

Centro's pipeline editor delivers a user friendly interface with 'drag & drop' functionality to simply configure pipeline actions. This gives business users the ability to self-service their own information integrations by connecting their data source to Centro.

Automation

Pipeline actions are either continually monitoring a file directory for modifications or scheduled to perform the data import across multiple data sources in an automated and orchestrated fashion. Centro automates the synchronization of your product data from your enterprise system to Centro.

Control

Centro delivers user based access rights and permissions to ensure that authorized personnel are responsible for managing and deploying pipelines to ensure that the organizations resources are consumed effectively and to mitigate known peak operating times.

About Actify:

Actify, Inc. is 100% focussed on delivering solutions that revolutionises the way product data and product information is managed and shared across the enterprise and throughout the development life cycle.

Actify understands product data, from the original designer's product definition within engineering to disparate product data across a manufacturer's extended enterprise.

Actify have been providing product visualization software to the discrete manufacturing industry for more than 15 years overcoming the challenge of sharing and communicating engineering type documents across the extended enterprise or supply chain. Today, Actify provides a unified platform that significantly speeds up enterprise data access everywhere and overcome the challenge of sharing engineering type data.
